                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of claimed DNA encoding the Southern CC copperhead snake venom disintegrin, contortrostatin (see AAY79413), a CC protein that inhibits the interactions between integrins and their CC protein that inhibits the interactions between integrins and their CC protein that inhibits the interactions between integrins and their CC amplification using primers (see AAZ94882-83) based on a conserved region CC of disintegrins. Contortrostatin precursor protein includes a pro-protein CC and a disintegrin region which includes an RGD loop that acts as an CC integrin antagonist. DNA molecules consisting of nucleotides 1341-1535 (encoding the disintegrin), 657-1316 (metalloproteinase), 87-656 (proceding the disintegrin), 657-1316 (metalloproteinase), 87-656 (proceding the disintegrin) regeators protein) of the present sequence CC are also claimed. These can be used in the recombinant production of CC pharmaceutical compositions for treating diseases associated with an CC integrin binding to an integrin receptor, especially to inhibit platelet CC aggregation, tumour metastasis, angiogenesis, neovascularization, cell CC adhesion, invasiveness, or growth (all claimed). The proteins are also CC useful for treating a thrombotic disorder, e.g. preventing arterial, CC venous, and microvascular thrombotis and thromboembolism, stroke, CC transient ischaemic attacks, arteriosclerosis, atherosclerosis, pulmonary CC embolism, aneurism, angina and myocardial infarction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                        The present sequence is southern copper head snake cDNA encoding contortrostatin (CN) protein. CN, a homodimeric disintegrin binds to integrin alphaybeta5 and induces alphaybeta3-mediated tyrosine phosphorylation of CAS and FAK in tumour cells. CN is useful for modulating the adhesion, mothlity, and invasiveness of integrin expressing cells, preferably tumour cells and for inhibiting the adhesion of integrin expressing cells to vitronectin. The pharmaceutical composition comprising CN is useful for inhibiting platelet aggregation, neovascularisation, angiogenesis, tumour metastasis, invasiveness or growth, for inhibiting metastasis in melanoma, caracinoma and sarcoma patients. It is also useful for treating thrombotic diseases,

             The invention relates to a new isolated polypeptide, which is a disintegrin protease designated ZSNX16 from Sistrurus miliarius, comprising an integrin binding region (designated ZSNX16-br) or a zinc-binding motif (designated ZSNX16-zbm). Also included are the nucleic acid encoding ZSNX16, producing anti-ZSNX16 attransformed cultured cell expressing ZSNX16, producing anti-ZSNX16 ibr and ZSNX16-zbm domains. The polypeptide is useful as a tool for investigating cell-matrix and cell-cell interactions, for studying cell proliferation or differentiation in human tissues, for studying immune recognition, fertilisation, growth control or angiogenesis, for identifying inhibitors of its activity, or themotherapy agents or small molecules). The ZSNX16 polypeptide is also need to the control of agents or small molecules. The ZSNX16 polypeptide is also

The polypeptide is also useful in the development of antithrombotic and antimetastatic agents due to their anti-adhesive, anti-migration of certain tumour cells, and anti-angiogenesis activities. The antibodies to the ZSNK16 polypeptide are useful for tagging cells that express ZSNK16, for isolating ZSNK16 by affinity purification, for detecting or quantifying soluble ZSNK16 as marker of underlying pathology or disease, or for screening expression libraries. The present sequence encodes ZSNK16

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and nucleic acids encoding it (ACC47594). Disintegrin-gamma is cysteinerich, contains an RGD integrin-binding motif, and acts as an integrin antagonist. Disintegrin gamma may be used to inhibit integrin-mediated activities such as vascularisation, and tumour growth and metastasis. The

                                                                                                                                                                                                                                                     The sequence is that of pAGalpha3-101 cDNA which comprises a polypeptide isolated from Agkistrodon halys blomhoffi. It was used in the isolation and prodn. of a polypeptide inhibiting platelet aggregation caused by ADP, collagen, thrombin, arachidonic acid and PAF. (Updated on 24-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence is that encoding a polypeptide which inhibits platelet aggregation caused by ADP, collagen, thrombin, arachidonic acid and (Updated on 24-OCT-2003 to standardise OS field)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     193.8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  seq length:

/clone_Tib="Snake Bothrops insularis library II2"
/clone_Tib="Snake Bothrops insularis rought venom glands, Vector: pGEM1IZf+; Site_1: Eco RI; Site_2: Not I; 5ug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to CDNA using Superscript Plasmid System for cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEM1IZf+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Paulo Lee Ho
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cluster was obtained through Blast searches (e-value
e-05)."

RI; Site_2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with oligo-(dT) and reverse
transcribed to cDNA using Superscript plasmid System for
cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEMIZE+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putative identification of each EST or
cluster was obtained through Blast searches (e-value <

/clone_lib="Snake Bothrops insularis library IL3"
/clone_lib="Snake Bothrops insularis rought to the program: venom glands; Vector: pGEM112f+; Site_l: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEM112f+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hoplee@usp.br
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               444 bp mRNA linear EST 01-MAY-2
Snake Bothrops insularis library IL3 Bothrops insularis
similar to Snake venom metalloproteinase, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         corresponds to cluster BITM30A (see Reference)

/clone_lib="Snake Bothrops insularis library IL3"
/note="Organ: venom glands; Vector: pGEM11Zf+; Site_1: Eco
RI; Site_2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with oligo-(dr) and reverse
transcribed to cDNA using Superscript Plasmid System for
cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGRM11Zf+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putative identification of each EST or
cluster was obtained through Blast searches (e-value <
e-05)."

/clone_Tib="Shake Bothrops insularis library IL3"
/clone_Tib="Shake Bothrops insularis rorgan: venom glands; Vector: pGEM11Zf+; Site_1: Eco RI; Site_2: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to CDNA using Superscript Plasmid System for CDNA Synthesis and Cloning (LifeTechnologies). The CDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGBM11Zf+ vector (promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value <
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      insularis

//clone_Tib="Snake Bothrops insularis library insularis stee_2: Not I, 500 of mRNA from Bothrops insularis venom glands were primed with oligo-(dT) and reverse transcribed to cDNA using Superscript Plasmid System for cDNA synthesis and Cloning (LifeTechnologise). The cDNAs were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGRNI2f+ vector (Fromega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

/note="Organ: venom glands; Vector: pGEMILZf+; Site_1: Eco
RI; Site_2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with oligo-(dT) and reverse
transcribed to cDNA using Superscript Plasmid System for
cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEMILZf+ vector (promega). ESTs
were generated from random clones and grouped in unique
sequences. The putative identification of each EST or
cluster was obtained through Blast searches (e-value <
e-05)."

/note="Organ: venom glands; Vector: pgEM12f; Site_1: Site_2: Not 1; Sug of mRNA from Bothrops insularis

venom glands were primed with oligo-(dT) and reverse

venom glands were primed with oligo-(dT) and reverse

transcribed to cDNA using Superscript Plasmid System for

cDNA Synthesis and Cloning (LifeTechnologies). The cDNAs

were selected by size (350-600 pb and up 600 pb) in

agarose gel electrophoresis, linked to Eco RI adapters and

directionally cloned in pgEM12f+ vector (Promega). ESTs

were generated from random clones and grouped in unique

sequences. The putative identification of each EST or

cluster was obtained through Blast searches (e-value <
e-05)."

/note="Organ: venom glands; Vector: pgEM11Zf+; Site_1: Eco
RI; Site_2: Not I; Sug of mRNA from Bothrops insularis
venom glands were primed with oligo-(dT) and reverse
transcribed to cDNA using Superscript Plasmid System for
cDNA synthesis and Cloning (LifeTechnologies). The cDNAs
were selected by size (350-600 pb and up 600 pb) in
agarose gel electrophoresis, linked to Eco RI adapters and
directionally cloned in pGEM11Zf+ vector (Promega). ESTs
were generated from random clones and grouped in unique
sequences. The putative identification of each EST or
cluster was obtained through Blast searches (e-value <

/clone_lib="snake Bothrops insularis library IL2"
/clone_lib="Snake Bothrops insularis library IL2"
/clone_lib="Snake Bothrops insularis program venom glands, vector: pGEMIIZE+; Site_l: Eco RI; Site_l: Not I; Sug of mRNA from Bothrops insularis venom glands were primed with oligo-(GT) and reverse transcribed to CDNA using Superscript plasmid System for CDNA Synthesis and Cloning (Liferechnologies). The CDNAS were selected by size (350-600 pb and up 600 pb) in agarose gel electrophoresis, linked to Eco RI adapters and directionally cloned in pGEM11ZF+ vector (Promega). ESTs were generated from random clones and grouped in unique sequences. The putative identification of each EST or cluster was obtained through Blast searches (e-value < e-05)."

Bulk tissue was collected from a whole 10 month old male
from the P6 strain. 1st strand cDNA was primed with a Not
I - oligo(dT) primer, double-stranded cDNA was cloned into
the Not I and EcoRV sites of pExpress-1. Library was
size-selected for >1.5 kb fragments for an average insert
size of 1.92 kb. Library was normalized to Cot5 with a
180-fold reduction of actin. A non-normalized version of
this library is also available (NICHD_XGC_Swb1). Library
was constructed by Open Biosystems (Huntsville, AL).
PLEASE NOTE: This library contains high level of
                                                                                                                                                                                                                                                   551

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
